Fancy Brown Pink

Measurements

3.65 x 3.60 x 2.35 mm

GIA No.

2145329185

Shape & Cutting

Cushion

Origin

Not Specified

THE CAUSE OF COLOR IN YOUR BROWN PINK DIAMOND

The combination of the pink and brown hue of your Fancy **Brown Pink** 0.23 carat diamond is caused by a fascinating geological phenomenon that occurs when certain diamonds undergo more forcible pressure and heat than others. Diamonds that are exposed to 900° Celsius and manage to withstand the immense pressure underground experience a unique change in their atomic alignment. That's when the magic happens! Scientists believe that when light enters your Fancy Brown Pink Cushion diamond and crosses its special atomic distortion, the light rays bend at an angle that absorbs a wide range of the color spectrum of light and creates the brown color, which will result in a combination of brown and pink color sensation.

A WORD ABOUT THE SATURATION OF YOUR DIAMOND

The grade '**Fancy**' represents a level with a significant presence of color and accounts for **49%** of all Brown Pink fancy Color diamonds.

There are Three available saturation levels in Pink color diamonds, Fancy being the Second most saturated.

Fancy Light brown-pink

Fancy brown-pink

Fancy Dark brown-pink

THE FUNDAMENTALS OF THIS DIAMOND'S SHAPE

This diamond has a straight outline with rounded corners in the four curved areas of the shape. Although the GIA does not categorize this shape as a Cushion, it is commonly referred to as one in the trade.

TRUE FACE-UP

The carat weight and physical size of a diamond are important factors in determining its value. However, when it comes to fancy colored diamonds, there is a tendency to prioritize other visual elements over their size, and as a result, the surface area of the face-up view is not always given high priority. Diamonds that appear slightly smaller are considered to be within the norm. However, diamonds that appear larger in relation to their weight will receive a premium.

* The data in this section pertains to the relationship between your diamond's face-up dimensions and the average face-up dimensions for relevant weight categories.

The Face-up of this 0.23 carat Cushion is equivalent to that of a **0.29 - 0.30** carat which is **~28.3% larger** than the average Cushion shape in this weight.

Large face-up commands a Premium

0.0% Of all Fancy Brown Pink diamonds are smaller than yours

THE SI2 CLARITY IN THIS FANCY BROWN PINK DIAMOND

Most Brown Pink fancy color diamonds are formed under greater underground pressure relative to other diamonds. As such, many Brown Pink rough diamonds are heavily fractured and cracked and as a result, receive a low clarity grade. Pursuing a high clarity grade during the manufacturing process usually entails a significant weight loss. The **SI2** clarity grade on your Fancy Brown Pink diamond represents only 19% of all Fancy Brown Pink diamonds in the 0 - 0.30 carat weight category.

THE MEDIUM BLUE FLUORESCENT IN THIS DIAMOND

Fluorescence refers to the emission of visible light when a diamond is exposed to UV light. The fluorescence in this diamond is caused by the presence of trace elements within the lattice of the diamond. When a diamond is exposed to UV light, these elements absorb the energy from the UV light. They become excited, and as a result, release energy in the form of a Blue glow. The **Medium Blue** fluorescence has very little to almost no impact on the quality of this 0.23 carat diamond. In order to view the fluorescent glow, one must use a special UV device.

HOW RARE IS THIS 0.23 CARAT?

- Only **1 in ~ 420,000** diamonds will have similar characteristics
- A mere **3 to 7** similar diamonds enter the market yearly
