Shape & Cutting

Cushion

Origin

Not Specified

THE CAUSE OF COLOR IN YOUR PINK PURPLE DIAMOND

The combination of the pink and purple hue in your Fancy **Pink Purple** 0.50 carat diamond is caused by a fascinating geological phenomenon that occurs when certain diamonds undergo more forcible pressure and heat than others. Diamonds that are exposed to 900° Celsius and manage to withstand the immense pressure underground experience a unique change in their atomic alignment. That's when the magic happens! Scientists believe that when light enters your Fancy Pink Purple Cushion diamond and crosses its special atomic distortion, the light rays bend at an angle that absorbs the green light and creates light waves. Pink diamonds that have a low amount of nitrogen, responsible for the yellow color sensation, will produce a 'colder' that leans towards the purple spectrum.

A WORD ABOUT THE SATURATION OF YOUR DIAMOND

The grade '**Fancy**' represents a level with a significant presence of color and accounts for **39%** of all Pink Purple fancy Color diamonds.

There are Four available saturation levels in Purple color diamonds, Fancy being the Second most saturated.

THE FUNDAMENTALS OF THIS DIAMOND'S SHAPE

The **Cushion** shape dates back to the early days when diamonds were initially made to decorate crowns of royalty. Today, the Cushion shape is still the most popular jewelry shape, and it is also yields the highest possible weight from rough diamonds. The pavilion on the bottom of your stone has a Starburst facet alignment to reinforce color reflection and brilliance. **27%** from all Pink Purple fancy color diamonds are polished as Cushion / Radiant.

TRUE FACE-UP

The carat weight and physical size of a diamond are important factors in determining its value. However, when it comes to fancy colored diamonds, there is a tendency to prioritize other visual elements over their size, and as a result, the surface area of the face-up view is not always given high priority.

Diamonds that appear slightly smaller are considered to be within the norm. However, diamonds that appear larger in relation to their weight will receive a premium.

* The data in this section pertains to the relationship between your diamond's face-up dimensions and the average face-up dimensions for relevant weight categories.

The face-up view of this 0.5 ct. is Subtly Smaller than Standard.

LEARN HOW UNIQUE IS THE WEIGHT OF A 0.50 CARAT IN PINK PURPLE DIAMONDS

51.7% Of all Fancy Pink Purple diamonds are smaller than yours

THE SI1 CLARITY IN THIS FANCY PINK PURPLE DIAMOND

Most Pink Purple fancy color diamonds are formed under greater underground pressure relative to other diamonds. As such, many Pink Purple rough diamonds are heavily fractured and cracked and as a result, receive a low clarity grade. Pursuing a high clarity grade during the manufacturing process usually entails a significant weight loss. Fancy Pink Purple diamonds with **SI1** clarity grade are bought widely and represent 34% of all Fancy Pink Purple diamonds in the 0.50 - 0.69 carat weight category.

F/IF Flawless / Internally flawless	VVS Very Very Slightly Included	VS Very Slightly Included	SI1 Slightly Included	SI2 Slightly Included	I Inclusion or Pique
