None

Color Grade

Faint Pink

Measurements

4.62 x 4.53 x 2.79 mm

GIA No.

2105563109

Shape & Cutting

Cushion

Origin

Not Specified

THE CAUSE OF COLOR IN YOUR PINK DIAMOND

The pink hue of your Faint **Pink** 0.50 carat diamond is caused by a fascinating geological phenomenon that occurs when certain diamonds undergo more forcible pressure and heat than others. Diamonds that are exposed to 900° Celsius and manage to withstand the immense pressure underground experience a unique change in their atomic alignment. That's when the magic happens! Scientists believe that when light enters your Faint Pink Cushion diamond and crosses its special atomic distortion, the light rays bend at an angle and absorb the green light, creating light waves ranging from red to violet and purple color.

A WORD ABOUT THE SATURATION OF YOUR DIAMOND

The grade "**Faint**" marks the tipping point between colorless and color diamonds. Diamonds graded as "Faint" receive the comment "Not Applicable" in the distribution section, as areas of color gently blend with colorless in the face-up view. A diamond with a "Faint" grade exhibits a whisper of color.

There are Seven available saturation levels in Pink color diamonds, Faint being the First most saturated.

THE FUNDAMENTALS OF THIS DIAMOND'S SHAPE

The **Cushion** shape dates back to the early days when diamonds were initially made to decorate crowns of royalty. Today, the Cushion shape is still the most popular jewelry shape, and it is also yields the highest possible weight from rough diamonds. The pavilion on the bottom of your stone has a Starburst facet alignment to reinforce color reflection and brilliance. **25%** from all Pink fancy color diamonds are polished as Cushion / Radiant.

TRUE FACE-UP

The carat weight and physical size of a diamond are important factors in determining its value. However, when it comes to fancy colored diamonds, there is a tendency to prioritize other visual elements over their size, and as a result, the surface area of the face-up view is not always given high priority.

Diamonds that appear slightly smaller are considered to be within the norm. However, diamonds that appear larger in relation to their weight will receive a premium.

*The data in this section pertains to the relationship between your diamond's face-up dimensions and the average face-up dimensions for relevant weight categories.

The Face-up of this 0.5 carat Cushion is equivalent to that of a **0.59 - 0.60** carat which is **~18.3% larger** than the average Cushion shape in this weight.

Large face-up commands a Premium

LEARN HOW UNIQUE IS THE WEIGHT OF A 0.50 CARAT IN PINK DIAMONDS

35.1% Of all Faint Pink diamonds are smaller than yours

THE VS1 CLARITY IN THIS FAINT PINK DIAMOND

Most Pink fancy color diamonds are formed under greater underground pressure relative to other diamonds. As such, many Pink rough diamonds are heavily fractured and cracked and as a result, receive a low clarity grade. Pursuing a high clarity grade during the manufacturing process usually entails a significant weight loss. The **VS** clarity grade on your Faint Pink diamond is considered a very high clarity grade for a Pink Faint color diamond and represents only 31% of all Faint Pink diamonds in the 0.50 - 0.69 carat weight category.

F/IF Flawless / Internally flawless	VVS Very Very Slightly Included	VS Very Slightly Included	SI1 Slightly Included	SI2 Slightly Included	I Inclusion or Pique
