GIA SUMMARY

Carat Weight

1.36 carat

Clarity Grade

SII

Fluorescence

Very Strong Blue

Color Grade

Fancy Light Green

Measurements

6.29 x 6.22 x 3.97 mm

GIA No.

2106791268

Shape & Cutting

Cushion

Origin

Not Specified

THE CAUSE OF COLOR IN YOUR GREEN DIAMOND

The **Green** color in this 1.36 carat diamond is typically caused by the absorption of red light waves, after a subterranean radiation exposure altered the atomic structure of the diamond, leading to its molecules absorbing red light and contributing to the green hue.

A WORD ABOUT THE SATURATION OF YOUR DIAMOND

The grade "**Fancy Light**" represents **39%** of all Green fancy Color diamonds. Although referred to as "Fancy Light", these diamonds may exhibit a prominent hue, transcending color effectively

There are Six available saturation levels in Green color diamonds, Fancy Light being the Third most saturated.

Very Light green

Light green

Fancy Light green

Fancy green

Fancy Intense green

Fancy Vivid green

THE FUNDAMENTALS OF THIS DIAMOND'S SHAPE

With a straight outline and rounded corners in the four curved areas of the shape, this diamond also has a modified pavilion to optimize color retention. Although the GIA does not categorize this shape as a Cushion, it is commonly referred to as one in the trade.

TRUE FACE-UP

The carat weight and physical size of a diamond are important factors in determining its value. However, when it comes to fancy colored diamonds, there is a tendency to prioritize other visual elements over their size, and as a result, the surface area of the face-up view is not always given high priority. Diamonds that appear slightly smaller are considered to be within the norm. However, diamonds that appear larger in relation to their weight will receive a premium.

* The data in this section pertains to the relationship between your diamond's face-up dimensions and the average face-up dimensions for relevant weight categories.

The Face-up of this 1.36 carat Cushion is equivalent to that of a **1.49 - 1.52** carat which is **~10.6% larger** than the average Cushion shape in this weight.

Large face-up commands a Premium

LEARN HOW UNIQUE IS THE WEIGHT OF A 1.36 CARAT IN GREEN DIAMONDS

47.5% Of all Fancy Light Green diamonds
are smaller than yours

THE SI1 CLARITY IN THIS FANCY LIGHT GREEN DIAMOND

The impact of the **SI1** clarity, in a Fancy Light Green, Cushion cut, is negligible compared to colorless diamonds especially when it is not visible to the naked eye. The SI1 clarity grade represents 12% of all Fancy Light Green diamonds in the 1 - 1.49 carat weight category.

THE VERY STRONG BLUE FLUORESCENT IN THIS DIAMOND

Fluorescence refers to the emission of visible light when a diamond is exposed to UV light. The fluorescence in this diamond is caused by the presence of trace elements within the lattice of the diamond. When a diamond is exposed to UV light, these elements absorb the energy from the UV light. They become excited, and as a result, release energy in the form of a Blue glow. **Very Strong Blue** fluorescence can affect the translucency or color of this 1.36 carat when exposed to direct sunlight. However, in some cases, the visual effect of the fluorescence will not compromise the diamond's appearance when it is viewed indoors.

HOW RARE IS THIS 1.36 CARAT?

- Only **1 in ~ 2,000,000** diamonds will have similar characteristics
- A mere **1 to 2** similar diamonds enter the market yearly

RARITY GRADE
VERY RARE

The data on the Fancy Color Diamond Diary© may change from time to time and is not a guarantee or a reflection of the diamond's value. The origin of the diamond is provided solely according to the input of the person for whom the report was produced. The gemological description of the diamond is obtained from the GIA website. To maintain the accuracy and currency of the information, it is advised to periodically update the diary, especially prior to each use. For additional information about the data and other limitations, please contact us at customers@fcresearch.org.
