6204461953

Shape & Cutting

Round

Origin

Not Specified

THE CAUSE OF COLOR IN YOUR GRAY DIAMOND

The **Gray** color in this 1.35 carat diamond emanates from a significant amount of hydrogen and boron that was trapped in the crystal during the formation of the rough.

A WORD ABOUT THE SATURATION OF YOUR DIAMOND

The grade "**Fancy Light**" represents **25%** of all Gray fancy Color diamonds. Although referred to as "Fancy Light", these diamonds may exhibit a prominent hue, transcending color effectively

There are Four available saturation levels in Gray color diamonds, Fancy Light being the Second most saturated.

Light grey

Fancy Light grey

Fancy grey

Fancy Dark grey

THE FUNDAMENTALS OF THIS DIAMOND'S SHAPE

Your 1.35 carat **Round** brilliant cut diamond is cut and polished with the same facet alignment and an angle of colorless diamonds. fancy color **round** diamonds do not retain color the way modified fancy shapes do and as such, are rarely seen in weights above 0.10 carat. Round fancy color diamonds in the Intense or Vivid grade fetch a significant premium in comparison to similar diamonds in other shapes. Only **27%** from all Gray fancy color diamonds are polished in this shape.

TRUE FACE-UP

The carat weight and physical size of a diamond are important factors in determining its value. However, when it comes to fancy colored diamonds, there is a tendency to prioritize other visual elements over their size, and as a result, the surface area of the face-up view is not always given high priority. Diamonds that appear slightly smaller are considered to be within the norm. However, diamonds that appear larger in relation to their weight will receive a premium.

* The data in this section pertains to the relationship between your diamond's face-up dimensions and the average face-up dimensions for relevant weight categories.

The face-up view of this 1.35 ct. is Significantly Smaller than Standard.

THE SI2 CLARITY IN THIS FANCY LIGHT GRAY DIAMOND

Gray Fancy Color Diamonds are extremely rare in nature and achieve their value from their captivating color. Unlike colorless diamonds, the impact of low clarity in Gray fancy color diamonds is negligible as long as it is not visible to the naked eye. A Fancy Light Gray with a **SI2** clarity represents 4% of all Fancy Light Gray diamonds in the 1 - 1.49 carat weight category.

F/IF Flawless / Internally flawless	VVS Very Very Slightly Included	VS Very Slightly Included	SI1 Slightly Included	SI2 Slightly Included	I Inclusion or Pique

THE STRONG BLUE FLUORESCENT IN THIS DIAMOND

Fluorescence refers to the emission of visible light when a diamond is exposed to UV light. The fluorescence in this diamond is caused by the presence of trace elements within the lattice of the diamond. When a diamond is exposed to UV light, these elements absorb the energy from the UV light. They become excited, and as a result, release energy in the form of a Blue glow. A **Strong Blue** Fluorescence can sometimes be seen under a direct sunlight and may temporarily weaken the saturation of this 1.35 carat diamond.

HOW RARE IS THIS 1.35 CARAT?

- Only **1 in ~ 16,000,000** diamonds will have similar characteristics
- A similar diamond enters the market once every **8 To 9 years**

RARITY GRADE
EXTREMELY RARE

The data on the Fancy Color Diamond Diary© may change from time to time and is not a guarantee or a reflection of the diamond's value. The origin of the diamond is provided solely according to the input of the person for whom the report was produced. The gemological description of the diamond is obtained from the GIA website. To maintain the accuracy and currency of the information, it is advised to periodically update the diary, especially prior to each use.
