VS1

### Fluorescence

None

### Color Grade

Fancy Light Orang...

### Measurements

5.18 x 4.33 x 3.02 mm

### GIA No.

5436249993

### Shape & Cutting

Radiant

### Origin

Not Specified

## THE CAUSE OF COLOR IN YOUR ORANGY PINK DIAMOND

The combination of the pink and orange hue in your Fancy Light **Orangy Pink** 0.66 carat diamond is caused by a fascinating geological phenomenon that occurs when certain diamonds undergo more forcible pressure and heat than others. Diamonds that are exposed to 900° Celsius and manage to withstand the immense pressure underground experience a unique change in their atomic alignment. That's when the magic happens! Scientists believe that when light enters your Fancy Light Orangy Pink Radiant diamond and crosses its special atomic distortion, the light rays bend at an angle that absorbs the green light and creates a pink color sensation. Pink diamonds that have a high amount of nitrogen, which absorbs the blue color and causes a yellow color, will lean towards a warmer hue and produce a diamond with a combination of orange and pink.

## A WORD ABOUT THE SATURATION OF YOUR DIAMOND

The grade "**Fancy Light**" represents **42%** of all Orangy Pink fancy Color diamonds. Although referred to as "Fancy Light", these diamonds may exhibit a prominent hue, transcending color effectively

There are Four available saturation levels in Pink color diamonds, Fancy Light being the First most saturated.

## THE FUNDAMENTALS OF THIS DIAMOND'S SHAPE

The **Radiant** cut is a square or rectangular diamond with clipped corners, usually polished with a minimum of 59 facets. The Radiant is polished with a Starburst style pavilion, inspired by a round brilliant cut diamond, hence the name of this shape. **31%** from all Orangy Pink fancy color diamonds are polished as Cushion / Radiant.

## TRUE FACE-UP

The carat weight and physical size of a diamond are important factors in determining its value. However, when it comes to fancy colored diamonds, there is a tendency to prioritize other visual elements over their size, and as a result, the surface area of the face-up view is not always given high priority.

Diamonds that appear slightly smaller are considered to be within the norm. However, diamonds that appear larger in relation to their weight will receive a premium.

\* The data in this section pertains to the relationship between your diamond's face-up dimensions and the average face-up dimensions for relevant weight categories.

The Diamond's face-up view appears true to its carat weight.

## LEARN HOW UNIQUE IS THE WEIGHT OF A 0.66 CARAT IN ORANGY PINK DIAMONDS

**36.3%** Of all Fancy Light Orangy Pink diamonds are smaller than yours

## THE VS1 CLARITY IN THIS FANCY LIGHT ORANGY PINK DIAMOND

Most Orangy Pink fancy color diamonds are formed under greater underground pressure relative to other diamonds. As such, many Orangy Pink rough diamonds are heavily fractured and cracked and as a result, receive a low clarity grade. Pursuing a high clarity grade during the manufacturing process usually entails a significant weight loss. The **VS** clarity grade on your Fancy Light Orangy Pink diamond is considered a very high clarity grade for a Orangy Pink Fancy Light color diamond and represents only 31% of all Fancy Light Orangy Pink diamonds in the 0.50 - 0.69 carat weight category.

|                                                  |                                              |                                        |                                 |                                 |                                |
