This letter is in response to your queries regarding the 8.83 ct Fancy Dark Gray Round Brilliant diamond described in GIA Colored Diamond Identification and Origin Report # 5222095847. An outstanding feature is the eye-visible inclusion throughout the crown side of the diamond. The inclusion has a four-fold symmetry and is related to the presence of submicron cloud inclusions in the diamond. Gem diamond with such distinct symmetry of a cloud is rare, and its positioning within the polished diamond gives it an overall dramatic appearance.
